

We Design & Manufacture Custom Graphic Panels for the Evolv Express®

We provide a turnkey solution for custom graphic panels for the Evolv Express®. Our high-quality graphic solutions will enhance and personalize your guest and employee experience and can also help you sell ad space for your special event clients, partners, or sponsors.

Precise Venting Holes for P1 Systems

The experts in our print team have decades of experience and the latest printing technology. They not only referenced Evolv's engineering specifications for exact location and dimension of the venting holes, but they also had a set of original Evolv Express panels from one of our customer's P1 units to ensure a perfect match.

3M™ Scotchcal™ Gloss Overlaminates

We add a layer of 3M clear overlaminates to enhance the gloss to give a wet paint look, and provide long-term ultraviolet and durable, physical protection.

The Best Artwork and Design

When you only have a few moments to capture attention, the right graphics can be the key to your branding success. Our team is available anytime to help you get a great design.

Collaborate with our design team on your unique panel needs. They will work on feedback and revisions and provide you with press proofs that you can share with your team to approve before we go to press.

Most companies charge extra for artwork and design, but we include an initial set of proofs in all our Evolv Express graphic panel solutions and still sell them for less than our competitors!

Love the New Look and Quality of Your Panels

Ultra-Quality and Crispness Digital Printing

We utilize UltraDrop Technology wide format printing technology from EFI that provides high apparent resolution, high-definition print quality, outstanding smoothness in shadows, gradients, and transitions.

Direct Print to .060 Styrene

Your custom panel designs are digitally printed directly onto Styrene in full color with UV inks, giving you a premium quality print that will last.

Panel Size to Exact Specifications

Our Evolv Express custom panels are manufactured exactly to Evolv's size specifications for both the PO system (59.38" H x 25" W) and the new P1 system (59.625" H x 25.25" W).

Panel Cutting

Our Evolv Express custom panels are printed on .060 Styrene and cut with a Kongsberg X plotter cutter, which is the industry benchmark of performance and quality.

"My team believes your custom graphic panels are better than the originals."

John George
President, Radiophone

Getting professional design and high-quality graphic panels for the Evolv Express has never been easier. Let our talented and experienced print and graphic teams take it from here.
